

## MONACO HLT by OZ strong and lightweight, made for SUVs and big sedans

OZ presents MONACO HLT and completes its line of wheels designed for the growing world of SUVs and big sedans. MONACO HLT is the new 5 spoke wheel in the All Terrain family. Crafted to meet the needs of large sized vehicles like SUVs and the more imposing sedans that call for substantial wheels but, since they are primarily driven on paved roads, the weight factor is also a consideration.

For the first time, a wheel for this auto segment is being produced using HLT (HIGH LIGHT TECHNOLOGY) technology, typically utilized to manufacture wheels for sportier cars.

Employing HLT technology for this kind of wheel makes it possible to significantly reduce the depth of the well, thus increasing resistance, an essential feature with regard to vehicles of a certain size where the wheels are called upon to sustain high level loads and stress.

Through optimization of manufacturing processes and its own particular design, the engineers at the OZ TECH LAB were able to significantly reduce weight, below the average wheels for this type of car, while at the same time ensuring a high load index (max load 950 kg per wheel).

Durability, flexible use, strength and reduced weight: these are the key words that describe the new MONACO HLT. All qualities that contribute lightness of form and design and a noticeable improvement in handling on larger vehicles. One piece wheel with 5 spoke design, MONACO HLT was crafted using special techniques, and technical and stylistic solutions (borrowed from the racing world) that are the signature attributes of OZ wheels.

The main features include:

- 5 SPOKES with lateral embossing for a light, streamlined, but at the same time compact, design;
- HLT (High Light Technology), the production process that makes it possible to achieve mechanical characteristics similar to those of a forged wheel, maximizing mechanical resistance to tension and force, while at the same time reducing weight appreciably;
- "Bow Cut" effect on the flanges to cut weight and at the same time give the design a more streamlined look;
- SUNKEN PCD: exclusive workmanship on the wheel hub, near the holes circle, that allows for weight reduction by intensifying its concavity and lending it a unique look.
- OZ ADAPTOR RING, thanks to this system, it's possible to replace the OZ center cap with the originals from the auto manufacturer.

MONACO HLT comes in 19", 20" and 22" diameters, in Grigio Corsa finishing.

Like all OZ wheels, MONACO HLT wheels are TÜV certified. Always ask your tire store for the certificate of approval for the wheels you are buying; don't pass on safety, it's your right!
